

INSECT-O-CUTOR

Non-Toxic Pest Control

Alert24[®]

Making a World
of Difference

Remote rodent monitoring system

the new
pesticide-free
system for
the monitoring
and control of
rodent pests

- 24/7 rodent protection & control
- Poison free
- Immediate warning of rodent presence
- Continuous remote monitoring
- Daily audit trail & full diagnostics

The Alert24 system continuously monitors rodent activity in your premises, trapping and killing rats and mice and alerting you to their presence.

Each Alert24 system consists of a base station, up to 99 remote monitoring and trapping units and mains powered repeater stations (shown left) where required.

There are two types of remote units, for rats and for mice.

Each Remote Unit consists of a rat or mouse snap trap, monitor, transmitter and battery pack, all fitted into a tamper resistant **Protecta** bait station. The Remote Unit is fitted with a sensor, to signal that the trap has been activated.

Each remote unit will send regular messages to the central base unit by radio. Each message will identify the unique identity number of the remote unit, confirm that the unit is operational and signal any activity.

Alert24[®]

Remote rodent monitoring system

Non-Toxic Pest Control

Making a World of Difference

The base unit sends SMS messages recording status and activity. Each type of message can be sent to a different mobile number or group of numbers. These messages can be routed via SMS and email to a suitable PC:-

- **Daily status message confirming - base station is working, all remote units are working, details of any remote unit not working, with ID**
- **Remote unit trap activated, with remote unit ID**

The daily status message is a unique feature of the Alert24 system. This timed and dated message confirms that the base and remote stations are all working correctly, providing protection 24 hours a day, 7 days a week.

Together with the timed and dated SMS activity messages, this provides a verifiable audit trail of protection and activity, invaluable for demonstrating due diligence.

Central Base Unit

The central base unit is mains powered and receives messages from a number of remote units (up to 99) and sends messages by SMS (text messages).

Non-Toxic Pest Control Systems

for flying insects • crawling insects • rodents
