

## Link Styles

1. Go to the 'Website Design – Navigation' page and scroll down.

One link can display in three different ways depending on its state.

**When you first visit a page** – These options control how the basic link looks.

2. Enter the Link Text Decoration. Select an option from the drop down list – None or Underline.
3. Enter the Link Font Weight. Select an option from the drop down list – Normal or Bold.
4. Enter the Link Colour. Select a colour from the colour picker or enter your own.

**After you have clicked a link** – The link changes when it has been visited.

5. Enter the Visited Link Font Weight. Select an option from the drop down list – Normal or Bold.
6. Enter the Visited Link Colour. Select a colour from the colour picker or enter your own

**When holding the cursor over the link** – Indicates a link that can be clicked.

7. Enter the Hover Link Font Weight. Select an option from the drop down list – Normal or Bold.
8. Enter the Hover Link Font Colour. Select a colour from the colour picker or enter your own
9. Enter the Hover Link Background Colour. This is optional. To activate select a colour from the colour picker or enter your own. The colour will show in the background of the text when the cursor is placed over the link. It creates a highlight effect.

If you don't want it to display type 'none' into the box.

**Please note:** If you are using this option with an E-Basket your small images (thumbnails) will display a border when the cursor is held over them to click for more information.
